HYDRANT FLUSHING NOTICE

As part of our annual water maintenance program, the City of Mayville will be flushing fire hydrants during the week of June 8, 2020 through the week of July 31, 2020 from 6 a.m. to 3 p.m.

During the flushing process you may notice that your service pressure is affected as well as a slight discoloration. This is caused by sediment or rust being flushed from the water mains. Please do not be alarmed as your water will clear up after running water for a short time.

The City of Mayville performs flushing operations to ensure hydrants are exercised and operational as well as to clean the piping system of any naturally settling rust and sediment.

Any questions concerning your water during the above times will be answered by calling 387-7906.
